

## BAY PARKING

1. Line your shoulder..... the white line and stop. Do your checks. **DON'T** forget to check over the left shoulder and through the rear window. Then full lock  $1 \frac{1}{4}$  turns and hold. As you move keep doing all around observation.
2. When you can see both white lines in the side mirrors- undo  $1 \frac{1}{4}$  steering back to the opposite way so the wheels are straight. Make little adjustment using half turns if it's not straight. If needed, go forward and come back.
3. Look under the door mirror- When about.....the bottom edge of your side door mirror gets to the long white line- Stop, handbrake and neutral. You are allowed to open door and check if you are in the box.

### Common reasons to fail:

- Not doing basic checks.
- Not checking rear window constantly.
- Not stopping for passengers or cars.
